

II. CLAIM AMENDMENTS

1. (Previously Amended) An electronic device, which comprises a display element to display information, wherein

said display element has two modes, a full-screen mode to use the entire display element to display a first information and a partial screen mode to use a first part of the display element in which partial screen mode a second part of the display element is switched off; and the device comprises:

B1
cont
means for switching the device into energy conservation mode by switching the display element to said partial screen mode;

means for controlling the display element during energy conservation mode to display information on said first part; and

changing means for changing the position of the first part of the display element on the display element at set intervals in order to avoid display burn-in.

2. (Currently Amended) A device according to claim 1, wherein said first part comprises an~~certain~~ amount of image particles, and the power consumption of the display element corresponds to the amount of said image particles.

3. (Previously Amended) A device according to claim 1, wherein the changing means is arranged to change the position of the first part in a certain order in certain intervals.

4. (Previously Amended) A device according to claim 1, wherein the changing means is arranged to randomly change the position of said first part.

5. (Previously Amended) A device according to claim 1, wherein the changing means is arranged to change the position of said first part by scrolling the position on the display element.

6. (Previously Amended) A device according to claim 1, wherein said first part comprises a certain amount of rows.

7. (Previously Amended) A device according to claim 1, wherein said first part comprises a certain amount of columns.

8. (Previously cancelled)

9. (Currently Amended) A device according to claim 1, which device comprises means for ending the energy conserving mode in response to one of the following events: user input, incoming call, an increase in ~~the amount of~~ displayed information and a combination of these.

10. (Original) A device according to claim 1, which device is a mobile station.

11. (Previously Amended) A method for decreasing the energy consumption of an electronic device, wherein

a first part of the display element is used and a second part of the display element is switched off to conserve energy;

information is presented on the first part of the display element; and

the method further includes changing the position of the first part of the display element on the display element at set intervals in order to avoid display burn-in.

12. (Previously Added) A device according to claim 1, wherein the changing means is arranged to change information displayed on the first part of the display element.

13. (Previously Added) An electronic device comprising:

 a display element to display information, wherein said display element has two modes, a full-screen mode to use the entire display element to display a first information and a partial screen mode to use a first part of the display element in which partial screen mode a second part of the display element is switched off;

means for switching the device into energy conservation mode by switching the display element to said partial screen mode;

means for controlling the display element during energy conservation mode to display information on said first part; and

changing means for changing information displayed on the first part of the display element at set intervals in order to avoid display burn-in.

14. (Previously Added) A device according to claim 13, wherein the changing is arranged to change the position of the first part of the display element on the display element.

15. (Previously Added) A method for decreasing the energy consumption of an electronic device, wherein

a first part of the display element is used and a second part of the display element is switched off to conserve energy:

Done.
information is presented on the first part of the display element; and

the method further includes changing information displayed on the first part of the display element at set intervals in order to avoid display burn-in.

16. (Previously Added) A method according to claim 15, further comprising changing the position of the first part of the display element on the display element.
